IT - FMS

We are managing day to day activities, data centres, IT- Hardware vendor coordination, antivirus, data security, backup and IT assets.
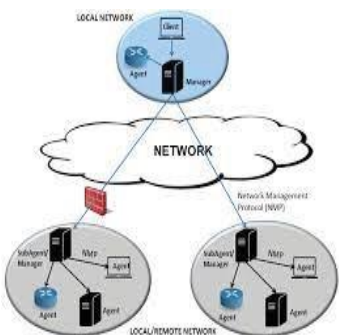

DATA CENTER SETUP

Data centre technology is critical and backbone for overall organization. Data centres serve several critical functions for business and organizations. To maintain your data centre servers, network, backup and storage devices, DUDE Technologies offers levels of maintenance and support that best align to the customer business needs.

NETWORK MANAGEMENT

Proper Network maintenance is both preventive and corrective. When technical failures occur, the consequences are typically not only expensive but have enormous time delays in operation productivity for the business. Network maintenance provided by Dude Technologies streamlines your systems and speeds up your business performance. The service provided has the appropriate resources. We provide a fully integrated and automated solution which optimizes fault management and ensures availability, unifies fault and performance management, automates change and configuration management to ensure compliance, and automates IT processes.
